

Digital Systems Program Sutherland to Cronulla

October 2023

Transport for NSW acknowledges the Darug and Eora Nations as the Traditional Custodians of the lands on which we work and pays respect to Elders past and present.

Transport for NSW (TfNSW) is rolling out new technology to upgrade Sydney's rail network and introducing modern signalling as part of the Digital Systems Program.

The Program will replace current signalling and train control technology with modern, internationally proven, intelligent systems.

It will help improve reliability and increase capacity on Sydney's railways once implemented widely across the network.

What work are we doing?

Upcoming work in October 2023 will include:

- Installing new trackside equipment
- Working within electrical relay rooms and substations
- Testing and commissioning works

Equipment to be used

Plant and equipment expected to be used includes excavator, hi-rail flatbed trucks on track, elevated work platforms, work vehicles, ladders, hand and power tools.

When and where we'll be working

- 6am to 6pm Saturday 7 October
- 6am to 6pm Sunday 8 October

Staff will begin mobilisation on site from 6am Saturday, however noise generating works will not begin until at least 8am Saturday and Sunday.

During this Sydney Trains trackwork weekend, we will continue work activities along the Sutherland to Cronulla rail corridor.

Completing this work during track work weekends minimises impacts on the community.

What will this mean for you?

Transport for NSW is committed to minimising the impact on the community. Despite this, in addition to work activity-related noise, you may notice an increase in construction vehicle movements within and near the rail corridor work areas.

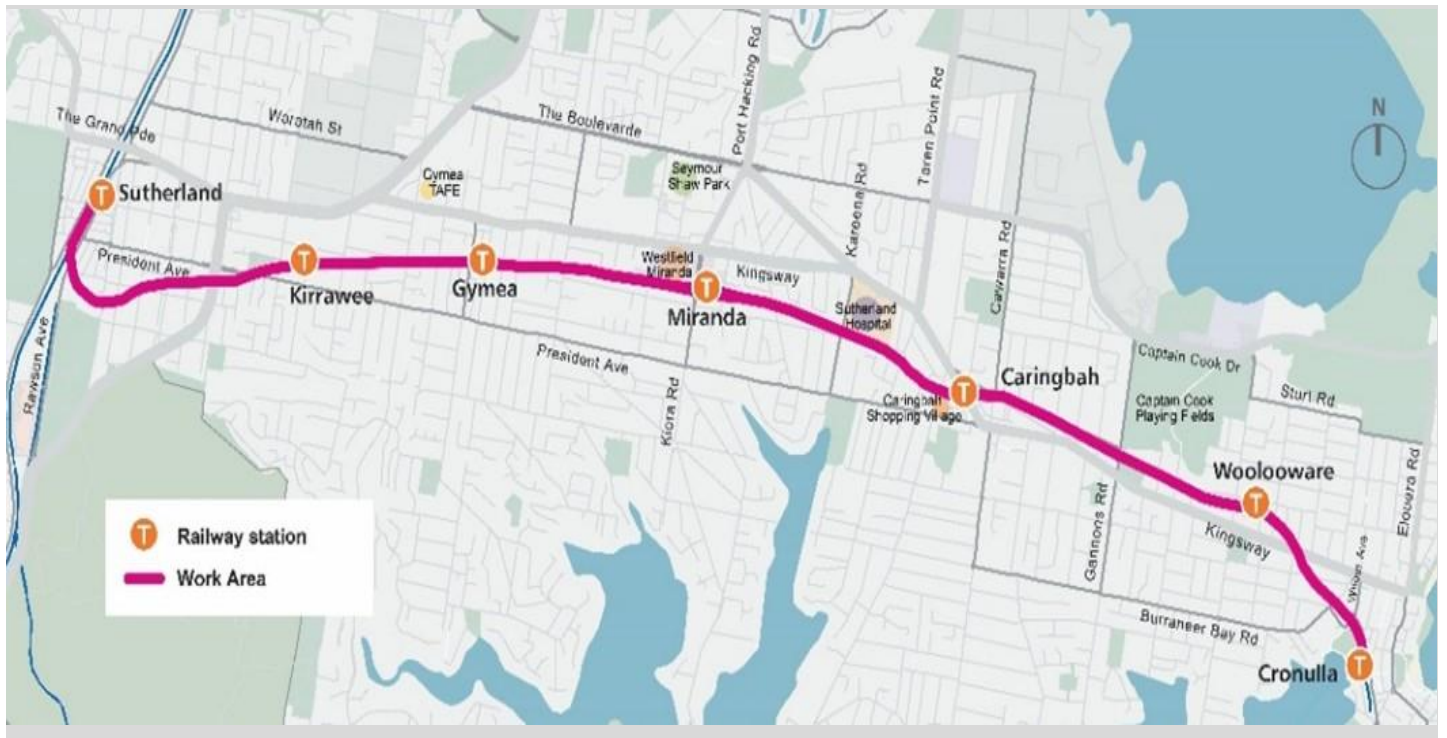

Train services will be affected during weekend work. Please contact Transport Info on 131 500 or visit transportnsw.info for information about replacement bus services.

Managing our impacts

We switch off equipment when it is not being used, place equipment as far away from properties as possible and monitor our work activities to make sure noise levels are being managed effectively. Higher noise-generating work is only expected to occur for short periods.
